MARK'N MEMO USER GUIDE

User guide

Clear, step-by-step instructions for people who are new to smartphones.

For version 1.1.19 | Build 24 | Updated October 28, 2026

What is new in 1.1.19

Add to memos by voice, create category memos by voice, and swipe to complete and restore memos. Alarm time guidance and lock activation are improved, along with the recording button and outfits. Existing users receive a one-time scrolling update message.

Choose what you need

1. Before you begin
2. Try the hands-on guide with Markun
3. Screens and icons
4. Create a memo with your voice
5. Type a memo
6. Organize and read memos
7. Set an alarm
8. Change settings
9. Backups and your data
10. Troubleshooting

01

Before you begin

The app saves text

Mark'n Memo turns speech into text. It does not save an audio recording of your voice.

Memos are stored on your device

There is no account-based automatic sync. Use Data management in Settings to back up important memos regularly.

Speech recognition comes from your device

Supported languages, accuracy, and network requirements vary by device, Android version, and speech recognition service.

Review the terms before use

On first launch, you must agree to the Terms of Use and acknowledge the Privacy Policy. You can exit the app if you do not agree.

Important

Removing the app may also remove memos stored on the device. Create a backup before uninstalling the app, resetting the device, or moving to a new phone.

FIRST HANDS-ON EXPERIENCE

Try the hands-on guide with Markun

On first use, a small Markun guides you on Home after the short introduction. Read each speech bubble and tap the highlighted control yourself.

1. **Tap the large Markun on Home.**
   If Android asks for microphone access, review and allow it to begin voice input.

2. **Say a few words, then tap the large Markun again.**
   Your words become text and are saved in Temporary memos. If you press and hold instead, release to finish.

3. **After the saved message appears, tap the highlighted Temporary memos button.**
   Read the memo you just made. The guide waits for you to finish checking it.

4. **Tap Try organizing.**
   Tap the square beside your memo and check that it is selected.

5. **Tap the highlighted category folder button.**
   Choose where to keep your memo. Ideas, Shopping, and Other are available on a fresh installation.

6. **Check that the memo has left Temporary memos.**
   It moved to your chosen category; it was not deleted.

7. **Tap the treasure chest button.**
   The category names appear.

8. **Tap the category you chose.**
   Check that your memo is inside that category.

9. **Tap Try an alarm.**
   Select the square beside the memo, then tap the highlighted clock button.

10. **Choose when to be reminded.**
    This sets a real alarm. Check the clock mark and changed memo text color after saving.

11. **When you have checked the result, tap Next.**
    Finish with Get started or open User Guide from the final message.

You can skip a step

Use Skip during voice input or Not now during organizing and alarms. Open Try voice input in Settings to try again. Memos created during the guide remain as ordinary memos. To remove a practice alarm, select the memo, tap the clock button, and choose Clear alarm.

Existing users do not automatically see the hands-on guide after updating. If you have deleted all custom categories, the guide skips organizing and continues to alarms.

02

Screens and icons

The table shows the actual icons used in Casual mode. Business mode changes their colors and style, but each icon performs the same action.

Actual icon	Name	What it does
	Temporary memos	Read saved memos before organizing them into categories.
	Treasure chest	Open the category list. Tap a category name to read the memos stored inside.
	Voice input	Turns speech into a text memo.
	Edit	Changes memo text or a category name.
	Add	Adds a new memo or category.
	Move to category	Organizes selected temporary memos.
	Copy	Copies the selected memo text.
	Alarm	Notifies you about a memo at a chosen time.
	Delete	Moves selected memos to Deleted.
	Settings	Changes display, language, data, and other options.

Select all

Tap the square beside “All” to select or clear every memo currently shown.

Reorder

When Custom order is selected, press and hold the three-line handle, then drag the memo up or down.

Home screen. The large microphone in the center creates a memo with your voice.

03

Create a memo with your voice

Press and hold

1. **Press and hold the large microphone.**
   Start speaking after the recording display appears and the phone gently vibrates.

2. **Say what you want to remember.**
   You can pause briefly to think. Some devices may divide a long speech recognition session into parts.

3. **Lift your finger when you finish.**
   The recognized text is saved as a temporary memo.

Tap to start and stop

1. **Tap the microphone once.**
   The recording display and elapsed time appear.

2. **Say what you want to remember.**

3. **Tap the microphone again to stop.**
   The recognized text is saved as a temporary memo.

> ### For better recognition
>
> Hold the device about 8 to 16 inches (20 to 40 cm) away, speak in short sentences, and talk a little more slowly than usual. Move away from loud TVs, fans, or traffic.

Moving to another screen or turning off the display ends voice input for safety. Text already recognized is saved as a temporary memo when possible.

04

Type a memo

1. **Tap the input field at the bottom of Home.**
   The keyboard appears.

2. **Type your memo.**

3. **Tap Send.**
   After the memo is saved, the field is cleared and the app returns Home.

When a category is open, use the plus button beside its name to add a memo directly to that category. After saving, the same category stays open so you can confirm the new memo.

05

Organize and read memos

A fresh installation starts with Ideas, Shopping, and Other in the app language. You can rename or delete these categories freely. Updating does not add them to existing categories or recreate deleted ones. Changing the app language does not automatically rename saved categories.

Move temporary memos to a category

1. **Open Temporary memos.**

2. **Tap the square beside each memo.**
   Tap All to select every memo shown.

3. **Tap the folder icon.**

4. **Choose the category where you want to keep the memo.**

5. **Check that the memo has left Temporary memos.**
   It moved to the category; it was not deleted.

6. **Tap the treasure chest button at the top center.**
   The category list opens.

7. **Tap the destination category name.**

8. **Check that your memo is inside the category.**

Create a category

1. **Open the category or chest screen.**

2. **Tap the plus button at the top.**

3. **Enter a category name and confirm it.**

Switch without returning Home

Use the Temporary memos button at the top right of the category screen to open temporary memos directly. On the Temporary memos screen, use the chest button at the top center to return directly to categories.

Category list. Tap a category to read the memos stored inside it.

Add to a memo by voice

1. **Open Temporary Memos or a category.**
   Tap the small microphone at the end of the memo text field.

2. **Speak the text to add.**
   Recognized text is appended on a new line after the existing text. The original text remains.

3. **Check the result.**
   Correct any mistakes by typing. Canceling voice input leaves the text unchanged.

The new memo field opened with + inside a category also has a microphone. Check the recognized text and tap Save to save it in that category. It remains a draft until saved. Voice input availability depends on the device speech service.

Swipe a finished memo to mark it complete

1. **Swipe a memo left or right and release.**
   A check mark and faded, crossed-out text appear briefly, then the memo moves to Completed memos. A short swipe does not change it.

2. **Open Completed memos at the end of the list.**
   Restore beside a memo restores that one item. Restore all at the bottom restores all completed memos in the current category or Temporary Memos list.

3. **Restore a memo to use it again.**
   Its text and category are preserved. Completion is separate from deletion and completed memos are not automatically deleted. Restore them before editing or deleting.

Alarms on completed memos

Completing a memo cancels its alarm. Restoring the memo does not restore its alarm automatically; set a new alarm if needed. The square selection checkbox is for organizing and other actions, not completion.

Read, edit, and reorder

- Tap memo text to edit it.
- Select memos with the squares, then copy or delete them together.
- Choose Newest, Oldest, or Custom order.
- In Custom order, press and hold the three-line handle, then drag it up or down.

- Deleted memos move to Deleted before they are permanently removed.

06

Set an alarm

1. **In Temporary memos or a category, select the square beside the memo you want a reminder for.**

2. **Tap the clock button in the action bar.**

3. **Choose a time.**
   Select 5, 10, or 30 minutes, 1 hour, or choose a date and time.

4. **When choosing a date and time, tap OK.**
   No second confirmation is needed.

The time picker shows both 24-hour time and AM/PM, for example 16:00 (4:00 PM). A past date or time displays a message and keeps the picker open so you can choose a future time.

Check that the alarm is set

A confirmation appears immediately after setting an alarm. The memo starts with a clock mark and its text becomes bold blue. The alarm time is not permanently shown in the memo list. To check or change the time, select the memo and tap the clock button. Choose Clear alarm to remove the alarm, its clock mark, and the alarm text color.

A notification can be late

Android power saving and the exact alarm permission can move the notification time. If the app shows instructions, check the permission in Android Settings.

Full-screen display while locked

On Android 14 or later, if full-screen alarm display is not allowed, the app explains this after you set an alarm. Use Open settings to allow it in Android Settings. If you do not allow it, the alarm still uses sound, vibration, and a high-priority notification.

You cannot save a time in the past. Future alarms are registered again after a device restart or app update.

07

Change settings

Settings includes display options, data management, the tutorial, and app information.

Language, theme, and background

Choose the app language, light or dark theme, background color, and casual or business appearance. In Casual mode, turn on Dress-up mode to let Markun's outfit and home-screen effects change with the seasons.

Special outfits and seasonal messages

Dress-up mode is off by default. Turn it on for Halloween outfits on October 10–31, Christmas outfits on December 4–25, and New Year outfits on January 1–14 each year. Markun returns to the usual seasonal outfit afterward.

For New Year, the Japanese app language shows a haori outfit; all other app languages show a shared celebration outfit. Changes follow your device's local date and work offline. During voice input, Markun keeps the outfit and presses the chest button. At New Year, the round button shows a greeting and the current year: Japanese greeting and era year for Japanese, or Happy New Year and the calendar year for other languages. Casual-mode messages also change during these periods, even when Dress-up mode is off.

Messages for the four seasons

In Japanese Casual mode, everyday messages change on the same schedule as seasonal outfits: spring (March–May), summer (June–August), autumn (September–November), and winter (December–February). This works offline, even with Dress-up mode off. The same message is shown throughout each day, with another entry selected the next day. Event messages take priority during special dates, then seasonal messages return. Business mode and everyday messages in other languages are unchanged.

Memo display

Show or hide creation dates and change the memo order.

App lock

Protect settings and memo screens with the device fingerprint, face, PIN, pattern, or password. Home stays available for quick capture. After you enable the lock and authenticate successfully, the app returns Home and protects settings and memo screens immediately. Restarting is not required.

Tutorial

Open Tutorial to review the short introduction. Choose Try voice input to create a memo by speaking, organize it into a category, and try setting an alarm with the hands-on guide.

App info

See the version, check for updates, open this guide, and read the privacy policy.

08

Backups and your data

Create a backup

1. **Open Data management from Settings.**

2. **Choose Backup.**

3. **Check the location and file name, then save.**
   If Google Drive appears, Android's file picker can save there.

Restore a backup

1. **Choose Restore in Data management.**

2. **Select a Mark'n Memo backup JSON file.**

3. **Read the confirmation and continue.**
   Restore replaces the current data with the backup contents.

Export and import

- Export to TXT, JSON, CSV, or Android sharing.
- Import supports compatible JSON created by Mark'n Memo.
- Import adds data without deleting existing memos.
- This is not automatic Google Drive sync. You choose a location for each operation.

Protect backup files

A backup contains memo text and settings. Check the destination and recipient, and do not store it where other people can read it.

09

Troubleshooting

Voice input does not start

1. If asked for microphone access, choose Allow.
2. Open Android Settings, Apps, Mark'n Memo, Permissions, and confirm that Microphone is allowed.
3. Close other recording or calling apps and try again.
4. Confirm that the device speech recognition service is enabled.

Speech is not converted correctly

Move to a quiet place, use short sentences, and speak a little more slowly. Also confirm that the app language matches the language you are speaking.

An alarm or notification does not appear

1. Confirm that Android notifications are allowed for Mark'n Memo.
2. Check that battery saving is not severely restricting the app.
3. If exact alarm instructions appear, check the permission in Android Settings.
4. Confirm that the device date, time, and time zone are correct.

I want to recover a deleted memo

Open Deleted in Settings. A memo more than 30 days past its deletion date is permanently removed during the next load and cannot be recovered.

Google Play update says it is unavailable

In-app updates do not work for an app installed outside Google Play. A Google Play installation and a newer eligible version are required.

A backup file cannot be imported

Confirm that it is compatible JSON created by Mark'n Memo. General TXT and CSV files cannot be imported directly. Keep the original file unchanged and retry with a copy.

This guide does not open

Check the internet connection and browser app. Save the PDF to the device if you need an offline copy.

SUPPORT

If the problem continues

When contacting support, include the device name, Android version, Mark'n Memo version, the action that caused the problem, and the exact message shown. Do not send private memo text.
